# Conversation Guide: Technical Readiness

Ask your IT colleagues two questions about supporting digital AP® Exams at your school.

| **Is our network ready to support digital AP Exams?**     | **Wireless strength and speed:** Your testing rooms need Wi-Fi coverage that supports the expected number of test takers.  
**Connectivity:** Students need a connection at the start and end of the test, but they can keep testing if they lose their connection or if the internet goes down momentarily.  
**Guest network:** Decide how to provide internet access to students and staff, including guests, even if they use personal devices. | ▪ Bandwidth of at least 1 Mbps for each student testing at the same time over the same network.  
| **Can we use school-managed devices for testing?**        | **Specifications:** The Bluebook™ testing app has device requirements typical of other applications used in schools.  
**Device management:** Students can test on 1:1 or shared school-managed devices or on personal devices. Your choice.  
**Device types:** Mac and Windows devices, iPads, and school-managed Chromebooks are all supported. | ▪ Supported operating systems and other specs vary by device type.  
▪ Battery life of at least 4 hours.  
▪ Chromebooks must be school-managed and run in kiosk mode.  
▪ Full specs at [cb.org/ap-digital-devices](http://cb.org/ap-digital-devices) |
